

Soccer

Overview

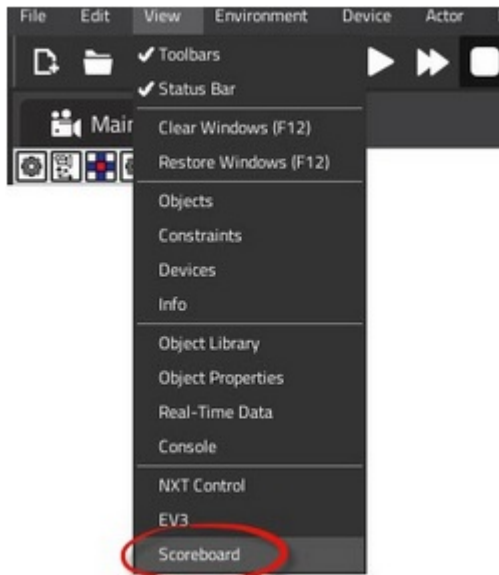

This is a virtual version of the World Robot Olympiad GEN II soccer field.

Objectives

- Score as many goals against your opponent as you can!

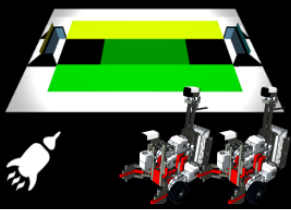

Hints

In the simulator, open scoreboard by clicking on **View** menu → **Scoreboard**.

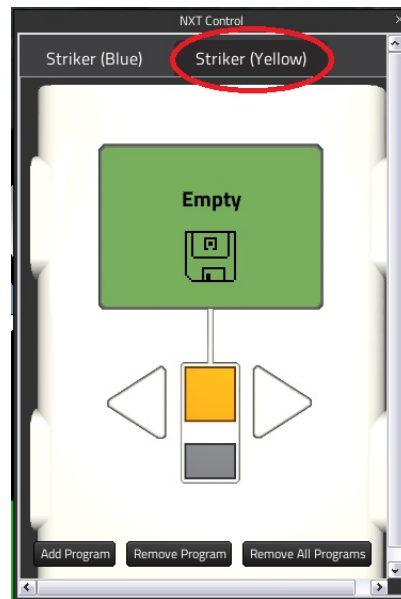

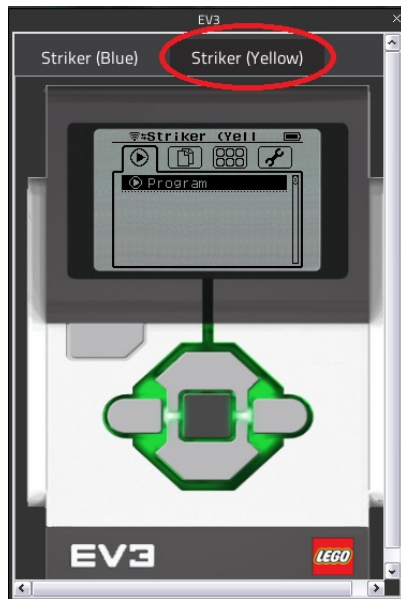

Use the IR Seeker sensor and Compass sensor to find the ball, and locate the opposing net.

NOTE: You require the programming blocks from HighTechnic® in order to use the IR Seeker and Compass Sensors. These programming blocks can be downloaded from this link: <https://www.hitechnic.com/downloads>

Soccer

To load a program to control the opposing robot, click on the tabs within the Brick display.

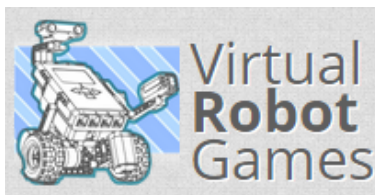

Pseudo Code

1. Start Program
2. Commence infinite loop
3. **IF** robot has the ball (Use color sensor to determine if the robot has the ball)
 - (a) Use compass sensor to point at the net
 - (b) Shoot the ball
4. **ELSE**
 - (a) Use the IR Seeker sensor to point at the ball
 - (b) Drive forward
5. Return to line 3, loop forever
